

Practitioner's Docket No. ACZ321

PATENT

Preliminary Classification:

Proposed Class:

Subclass:

NOTE: "All applicants are requested to include a preliminary classification on newly filed patent applications. The preliminary classification, preferably class and subclass designations, should be identified in the upper right-hand corner of the latter of transmittal accompanying the application papers, for example 'Proposed Class 2, subclass 129.' " M.P.E.P. § 601, 7th ed.

# IN THE UNITED STATES PATENT AND TRADEMARK OFFICE

**Box Patent Application** Assistant Commissioner for Patents Washington, D.C. 20231

## NEW APPLICATION TRANSMITTAL

Transmitted herewith for filling is the patent application of

Inventor(s):

ALLAN CAMERON

WARNING: 37 C.F.R. § 1.41(a)(1) points out:

(a) A patent is applied for in the name or names of the actual inventor or inventors.

"(1) The inventorship of a nonprovisional application is that inventorship set forth in the eath or declaration as prescribed by § 1.63, except as provided for in § 1.53(d)(4) and § 1.63(d). If an cath or declaration as prescribed by § 1.63 is not filed during the pendency of a nonprovisional application, the inventorship is that inventorship set forth in the application papers filed pursuant to § 1.53(b), unless a petition under this paragraph accompanied by the fee set forth in § 1.17(i) is filed supplying or changing the name or names of the inventor or inventors.

For (title):

## SELF-MOUNTING SAFETY WINDOW INSERT

## CERTIFICATION UNDER 37 C.F.R. § 1.10\*

(Express Mail label number is mandatory.) (Express Mail certification is optional.)

I hereby certify that this New Application Transmittal and the documents referred to as attached therein are being in an envelope deposited with the United States Postal Service on this date ... as "Express Mail Post Office to Addressee," mailing Label Number 5176980496 DU dressed to the: Assistant Commissioner for Patents, Washington, D.C. 20231.

ALLAU CAMER<u>ON</u> or print name of person malling paper)

Signature of person mailing paper

WARNING: Certificate of malling (first class) or facsimile transmission procedures of 37 C.F.R. § 1,8 cannot be used to obtain a date of mailing or transmission for this correspondence.

\*WARNING: Each paper or fee filed by "Express Mail" must have the number of the "Express Mail" mailing label placed thereon prior to mailing. 37 C.F.R. § 1.10(b).

"Since the filing of correspondence under § 1.10 without the Express Mail mailing label thereon is an oversight that can be evoided by the exercise of reasonable care, requests for waiver of this requirement will not be granted on petition." Notice of Oct. 24, 1996, 60 Fed. Reg. 56,439, at 56,442.

1. Typ	e of	Appl	ication
--------	------	------	---------

This new application is for a(n)

(check one applicable item below)

Original (nonprovisional)

Design

Plant

WARNING: Do not use this transmittal for a completion in the U.S. of an International Application under 35 U.S.C. § 371(c)(4), unless the International Application is being filed as a divisional, continuation or continuation-in-part application.

WARNING: Do not use this transmittal for the filing of a provisional application.

NOTE: If one of the following 3 items apply, then complete and attach ADDED PAGES FOR NEW APPLICATION TRANSMITTAL WHERE BENEFIT OF A PRIOR U.S. APPLICATION CLAIMED and a NOTIFICATION IN PARENT APPLICATION OF THE FILING OF THIS CONTINUATION APPLICATION.

Divisional.

Continuation.

Continuation-in-part (C-I-P).

## 2. Benefit of Prior U.S. Application(s) (35 U.S.C. §§ 119(e), 120, or 121)

NOTE: A nonprovisional application may claim an invention disclosed in one or more prior filed copending nonprovisional applications or copending international applications designating the United States of America. In order for a nonprovisional application to claim the benefit of a prior filed copending nonprovisional application or copending international application designating the United States of America, each prior application must name as an inventor at least one inventor named in the later filed nonprovisional application and disclose the named inventor's invention claimed in at least one claim of the later filed nonprovisional application in the manner provided by the first paragraph of 35 U.S.C. § 112. Each prior application must also be:

- (i) An international application entitled to a filing date in accordance with PCT Article 11 and designating the United States of America; or
  - (ii) Complete as set forth in § 1.51(b); or
- (iii) Entitled to a filing date as set forth in § 1.53(b) or § 1.53(d) and include the basic filing fee set forth in § 1.16; or
- (iv) Entitled to a filing date as set forth in § 1.53(b) and have peid therein the processing and retention fee set forth in § 1.21(f) within the time pedod set forth in § 1.53(f).

37 C.F.R. § 1.78(a)(1).

NOTE: If the new application being transmitted is a divisional, continuation or a continuation-in-part of a parent case, or where the parent case is an International Application which designated the U.S., or benefit of a prior provisional application is claimed, then check the following item and complete and attach ADDED PAGES FOR NEW APPLICATION TRANSMITTAL WHERE BENEFIT OF PRIOR U.S. APPLICATION(S) CLAIMED.

WARNING: If an application claims the benefit of the filing date of an earlier filed application under 35 U.S.C. §§ 120, 121 or 365(c), the 20-year term of that application will be based upon the filing date of the earliest U.S. application that the application makes reference to under 35 U.S.C. §§ 120, 121 or 365(c). (35 U.S.C. § 154(a)(2) does not take into account, for the determination of the patent term, any application on which priority is calmed under 35 U.S.C. §§ 119, 365(a) or 365(b).) For a c-i-p application, applicant should review whether any claim in the patent that will issue is supported by an earlier application and, if not, the applicant should consider canceling the reference to the earlier filed application. The term of a patent is not based on a claim-by-claim approach. See Notice of April 14, 1995, 60 Fed. Reg. 20,195, at 20,205.

	Entity Statement(s)
	Statement(s) that this is a filing by a small entity under 37 C.F.R. § 1.9 and 1.27 is (are) attached.
WARNING:	"Status as a small entity must be specifically established in each application or patent in which the status is available and desired. Status as a small entity in one application or patent does not affect any other application or patent, including applications or patents which are directly or indirectly dependent upon the application or patent in which the status has been established. The refiling of an application under § 1.53 as a continuation, division, or continuation-in-part (including a continued prosecution application under § 1.53(d)), or the filing of a reissue application requires a new determination as to continued entitlement to small entity status for the continuing or reissue application. A nonprovisional application claiming benefit under 35 U.S.C. § 119(e), 120, 121, or 365(c) of a prior application, or a reissue application may rely on a statement filed in the prior application or in the patent if the nonprovisional application or the reissue application includes a reference to the statement in the prior application or in the patent or includes a copy of the statement in the prior application or in the patent and status as a small entity is still proper and desired. The payment of the small entity basic statutory filing fee will be treated as such a reference for purposes of this section." 37 C.F.R. § 1.28(a)(2).
WARNING:	"Small entity status must not be established when the person or persons signing the statement can unequivocally make the required self-certification." M.P.E.P., § 509.03, 6th ed., rev. 2, July 1996 (emphasis added).
	(complete the following, If applicable)
	Status as a small entity was claimed in prior application

## Authorization to Charge Additional Fees

<b>WARNING</b>	: If no fees are to be paid on filing, the following items should not be completed.
	<ul> <li>Accurately count claims, especially multiple dependent claims, to avoid unexpected high charges if extra claim charges are authorized.</li> </ul>
	The Commissioner is hereby authorized to charge the following additional fees by this paper and during the entire pendency of this application to Account No
	☐ 37 C.F.R. § 1.16(a), (f) or (g) (filling fees)

□ 37 C.F.R. § 1.16(a), (f) or (g) (filling fees)□ 37 C.F.R. § 1.16(b), (c) and (d) (presentation of extra claims)

NOTE: Because additional fees for excess or multiple dependent claims not paid on filing or on later presentation must only be paid or these claims cancelled by amendment prior to the expiration of the time period set for response by the PTO in any notice of fee deficiency (37 C.F.R. § 1.16(d)), it might be best not to authorize the PTO to charge additional claim fees, except possibly when dealing with amendments after final action.

- 37 C F.R. § 1.16(e) (surcharge for filing the basic filing fee and/or declaration on a date later than the filing date of the application)
- ☐ 37 C.F.P. § 1.17(a)(1)-(5) (extension fees pursuant to § 1.136(a)).
- ☐ 37 C.F.R. § 1.17 (application processing fees)

NOTE: ". . A written request may be submitted in an application that is an authorization to treat any concurrent or future reply, requiring a petition for an extension of time under this paragraph for its timely submission, as incorporating a petition for extension of time for the appropriate length of time. An authorization to charge all required fees, fees under § 1.17, or all required extension of time fees will be treated as a constructive petition for an extension of time under this paragraph for its timely submission. Submission of the fee set forth in § 1.17(a) will also be treated as a constructive petition for an extension of time in any concurrent reply requiring a petition for an extension of time under this paragraph for its timely submission." 37 C.F.R. § 1.136(a)(3).

- ☐ 37 C.F.R. § 1.18 (issue fee at or before mailing of Notice of Allowance, pursuant to 37 C.F.R. § 1.311(b))
- NOTE: Where an authorization to charge the Issue fee to a deposit account has been filed before the mailing of a Notice of Allowance, the issue fee will be automatically charged to the deposit account at the time of mailing the notice of allowance, 37 C.F.R. § 1.311(b).
- NOTE: 37 C.F.R. § 1.28(b) requires "Notification of any change in status resulting in loss of entitlement to small entity status must be filed in the application . . . prior to paying, or at the time of paying, . . . the issue fee. . . " From the wording of 37 C.F.R. § 1.28(b), (a) notification of change of status must be made even if the fee is paid as "other than a small entity" and (b) no notification is required if the change is to another small entity.

#### SAFETY SHEILD WINDOW INSERT

## BACKGROUND OF THE INVENTION

The present invention is directed to the field of automotive safety equipment. More particularly, the present invention is directed to a defeasible shield window insert that may be inserted and retained within an opening for an automotive window.

Automobile manufacturers are increasingly incorporating safety features into the design of automobiles, however, with respect to the windows on the automobile, the industry standard remains to simply use a glass window retracting into the door frame. One safety feature that has been incorporated has been the use of a locking device activated by the driver which can be used to prevent passenger windows from being opened. This device is primarily intended for limiting the ability of small children to open a passenger door window.

With respect to a first aspect of the present invention, there are few, if any, devices available to restrain a child or family pet, such as a dog or cat, from exiting through an open window, other than a cage or container. For the safety and comfort of the child or pet, it is clearly beneficial to allow a constant flow of fresh air into the vehicle. Currently, the only choice for parents, or pet owners, who wish to bring safety and comfort to their children and or pets; not confining them physically, or have concern about the amount of air flow, is to limit how far down the window is retracted; thus preventing the child or pet from exiting the window.

With respect to a second aspect of the invention, there has been increasing concern about, and awareness of, the vulnerability of a vehicular occupant to bodily injury or attack as a result of the relative ease of access to the occupant of a vehicle via the glass window of the door. Glass windows may easily be broken and provide little, if any, resistance to assault with a gun.

Currently, the only alternative for increasing the safety of a vehicle occupant with respect to the glass window is to have a custom modification of the vehicle done to install a 'so called

"bullet-proof" window. Such custom modifications are both expensive and relatively uncommon, requiring extensive modifications to the door assembly. Accordingly, the installation of bullet proof windows in vehicles is not commonplace.

A first effort to address the foregoing issues was detailed in applicant's U. S. Patent No. 5,470,542 issued November 5, 1996, herein incorporated by reference. All of the claims of the No. 5,470,542 patent were based on a window insert that occupied the area normally occupied by the original window. The window insert fitted into the upper channel of the window frame and was retained in its place by the original window fitting into a groove running along the bottom of the insert.

The No. 5,470,542 patent's window insert retention system, and because the window insert took the place of the original window, greatly limited the use of the invention. The window could not be rolled up when the insert was in place, and the driver was compelled to stop and remove the insert during inclement weather, or to reduce the flow of air through the insert. The bullet proof window insert needs extensive and complicated weather proofing to be used in any inclement weather. Accordingly, it would be beneficial to have an alternative window insert that allows the car's windows to be rolled up and down while the insert remains in place.

#### SUMMARY OF THE INVENTION

The invention is directed to an insert formed from a clear or translucent material, adapted to be inset into, and retained by the window opening within conventional automobiles. With the first aspect of the invention the window insert was intended for use by parents and pet owners, and included a plurality of openings allowing venting of air for the benefit of children and pets, yet having the openings proportioned to prevent the child or pet from exiting the vehicle via the window. The material forming the window insert was preferably a plastic, such as a polycarbonate, or acrylic material.

In the second aspect of the invention the window insert is formed from a high impact resistant transparent material. The window insert is easily installed into the window frame and retained by the window itself. The high impact material forming the window insert is preferably a "bullet proof" material, such as a glass composite or glass-plastic composite.

For either of the two alternative aspects of the invention the window insert includes a mounting bracket which slips between and resides between the window and its lower inside weather-stripping. The window insert has an upper protruding edge, either integral, or separately attached, that is inserted into and shares with the window, the upper channel of the window frame. The window insert attaches to the mounting bracket with fasteners. The window insert sits on the inside of the window. At this point the window insert is fully installed and the window can be raised or lowered. The automobile can be driven with the insert in place, whether the window is rolled up or down. The mounting bracket can have different size offsets to allow for different thickness of the bulletproof window, allowing various levels of protection. The offset also allows for airflow between the window insert and the window, and prevents fogging. No attachments or modification of any kind have been made to the door, car windows, or window frames.

#### **BRIEF DESCRIPTION OF THE DRAWINGS**

- **FIG. 1** is a perspective view of the window insert according to the first aspect of the present invention;
- **FIG. 2** is a perspective view of another embodiment of the window insert according to the first aspect of the present invention;
  - **FIG. 3** is a perspective of an alternate embodiment of the window insert;
  - FIG. 4 is an alternative design for the orifices of the window insert;
- **FIG. 5** is a perspective view of the window insert according to the second aspect of the present invention;
- FIG.6 is a perspective view of an alternative embodiment of the window insert according to the second aspect of the present invention;
  - **FIG.7** is a section view illustrating the installation of the window insert;
- **FIG. 8** is a perspective view of an installed window insert from the outside of the automobile.

#### DETAILED DESCRIPTION OF THE PREFERRED EMBODIMENTS

FIG. 1 depicts a window insert 20 according to a first aspect of the invention. The mounting bracket 21 has a bottom blade 22 sized to be insertable between a standard window 23 of an automobile and the lower inside weatherstripping 24 of the window 23. The mounting bracket 21 has a plane 25 upon which the window insert 20 rests. The mounting bracket 21 also has two fastening devices 26 which retain the window insert 20 having two fastening device receivers 27

The window insert 20 has an upper protruding edge 28 sized to be insertable, along with the window 20, into the upper receiving channel 29 of the window frame of the automobile door.

The insert has a notched bottom 30 to rest upon the mounting bracket plane 25 and two fastening device receivers 27 to retain the window insert 20 in the window frame of the automobile door.

Accordingly, it may be appreciated that to install the window insert 20 of the present invention, the window 23 is retracted, the bottom blade 22 of the mounting bracket 21 is inserted between the window 23 and the lower inside weatherstripping 24. The upper protruding edge 28 of the window insert 20 is inserted into the upper receiving channel 29 of the window frame, and the window insert's notched bottom 30 is rested on the mounting bracket plane 25. The window insert 20 is then retained in place by engaging the mounting bracket fastening device 26 with the window insert fastening device receiver 27. At this point, the window 23 may be raised or lowered as desired. It also may be appreciated that at no place has the window, window frame, or automobile door been modified or attached to.

Similarly, FIG 2 depicts another embodiment of the window insert 20 according to the first aspect of the invention. The window insert 20 has a bottom blade 31 which is sized to be insertable between a standard window 23 of an automobile and the lower inside weatherstripping 24 of the window 23. The top of the window insert 20 has a receiving edge 32 and fastening devices 33.

The top mounting bracket 34 has a protruding edge 35 sized to be insertable along with the window 23 into the upper receiving channel 29 of the window frame. The top mounting bracket 34 also has fastening device receivers 36.

Accordingly, it may be appreciated that to install this embodiment of the window insert 20 of the present invention, the window 23 is retracted. The bottom blade 31 of the window insert 20 is inserted between the window 23 and the lower inside weatherstripping 24. The top mounting bracket 34 is inserted into the upper receiving channel 29 of the window frame and is rested on the receiving edge 32 of the window insert 20. The window insert 20 is retained in the window frame by engaging the window insert fastening device 33 and the tip mounting bracket fastening device receivers 36. At this point the window 23 may be raised or lowered as desired and no modification have been made to the car window, window frame, or automobile.

In the first aspect of the present invention, wherein the window insert is used primarily to retain childred or pets, it is preferred to include at least one and potentially a plurality of holes or orifices 37, within the window insert 20 so that airflow can be facilitated. In the most basic embodiment of the invention, the orifices 37 may be simply circular openings cut perpendicular to the plane faces of the window insert, as shown in **FIG 1**.

FIG 3 is a perspective view of another alternative embodiment for a window insert 38, and FIG 4 shows an enlarged perspective view identified by circle 4—4 in FIG 3. In the design according to FIGS 3 and 4, the window insert 38 is formed to define a stepped pocket 39 to accept the top mounting bracket, and a blade 40 at the lower edge to be insertable between the window and the lower inside weatherstripping. In addition the window insert 38 may include orifices 41 having a circumferential ridge 42, which defines and further strengthens the window

insert 38. The design of FIGS 3 and 4 is particularly well suited to manufacture using a vacuum molding technique.

Moreover, for a second aspect of the invention, wherein the window insert is to be used primarily as a high impact resistant bullet proof shield, the window insert would be devoid of orifices as they are illustrated in **FIG 5**. For these applications, the window insert may be manufactured of laminated layers **43** from plastics such as polycarbonate or acrylic or plastic laminates, or glass, or glass-plastic composites.

FIG 5 illustrates the mounting bracket variation for the bullet proof window insert application. The mounting bracket 44 has an offset mounting plane 45 to accept varying thicknesses of the bullet proof window inserts 46, which provide different levels of protection. The offset mounting plane 45 also enhances air flow around the window insert 46, thereby preventing fogging in certain inclement weather conditions.

Ergonomically and aesthetically, it is desirable to have a curved window insert 46 which accommodates the natural contour of the curved glass window of most standard vehicles as FIG 5 illustrates. However, it maybe less expensive to fabricate window inserts from a flat sheet of glass composite or glass-plastic composite.

FIG 5 also illustrates one method of forming or manufacturing the window inserts of the present invention. As it may be appreciated, window shapes and sizes vary so greatly from automobile to automobile that the window inserts will be manufactured or formed to provide a custom fit in most applications.

FIG 6 illustrates another alternative window insert embodiment where as the protruding edge 48 of the window insert 47 is fabricated from a separate material, such as a plastic or a metal, such as aluminum, or steel, is attached to the window insert in some manner, such as a fastener or adhesive. This may provide added strength to the window insert, provide solutions for an unusual application, or aid in manufacturing.

FIG 7 illustrates the installation process of one embodiment of the window insert. The mounting bracket blade 49 is inserted between the window 50 and the lower inside weatherstripping 51 of the window 50. The upper protruding edge 52 of the window insert 54 is inserted into the upper window channel 53. The window insert 54 is rested on the mounting bracket plane 55 and then retained in place by the fastening system 56. At this point, the window 50 may be raised and occupy the upper window channel 53 with the upper protruding edge 52 of the window insert 54.

**FIG 8** illustrates the window insert in place as viewed from the outside of the automobile door.

It should be evident from the foregoing description that the present invention provides many advantages over the prior art, for parents, pet owners, and vehicle occupants who wish to increase the security of a vehicle. Although preferred embodiments are specifically illustrated herein, it will be appreciated to those skilled in the art that many modifications and variations of the present invention are possible. It is therefore preferred that the present invention be limited only by the proper literal and equivalent scope of the appended claims.

#### What is claimed is:

1. A safety device for an automobile vehicle having door windows defined by a retractable glass panel which is guided into a receiving frame, the safety apparatus comprising:

a window insert formed from a sheet of optically transmissive material, said window insert having an upper edge defined to be inserted, along with the retractable glass panel window, into the upper receiving channel of the window frame, and

a mounting bracket with a lower edge defined to be inserted between the retractable glass panel window and the lower inside weatherstripping of said retractable glass panel window, said mounting bracket having a flat surface to receive the window insert, and said mounting bracket having one or more fasteners to retain the window insert.

- 2. A safety device of claim 1 wherein said window insert is formed from a material selected from the group consisting of optically transmissive polycarbonates, acrylics, and plastics.
- 3. A safety device of claim 1 wherein said window insert is formed from a bullet proof material.
- 4. A safety device of claim 3 wherein said bullet proof material is selected from the group consisting of glass composite and glass/plastic composite.
- 5. A safety device of claim 1 wherein said window insert has the bottom edge notched to assist during installation and accepts the mounting bracket.
- 6. A safety device of claim 1 wherein said window insert is formed from a material selected from the group consisting of opaque polycarbonates, acrylics, and plastics.
- 7. A safety device for an automobile vehicle having door windows defined by a retractable glass panel which is guided into a receiving frame, the safety apparatus comprising:

A window insert formed from a sheet of optically transmissive material, said window insert having a lower edge defined to be inserted between said retractable glass panel window and the lower inside weatherstripping of said retractable glass panel window, said window insert having at least one orifice allowing airflow through said window insert, said window insert having one or more fasteners' and

A mounting bracket with an upper edge defined to be inserted, along with said retractable glass panel window, into the upper receiving channel of the window, said mounting bracket having one or more fastening receivers.

- 8. A safety device of claim 7 wherein said window insert is formed from a material selected from a group consisting of optically transmissive polycarbonates, acrylics, and plastics.
- 9. A safety device of claim 7 where said window insert is formed from bullet proof material.

- 10. A safety device of claim 9 wherein said bullet proof material is selected from the group consisting of glass composite and glass plastic composite.
- 11. A safety device for an automobile vehicle having door windows defined by a retractable glass panel which is guided into a receiving frame, the safety apparatus comprising:

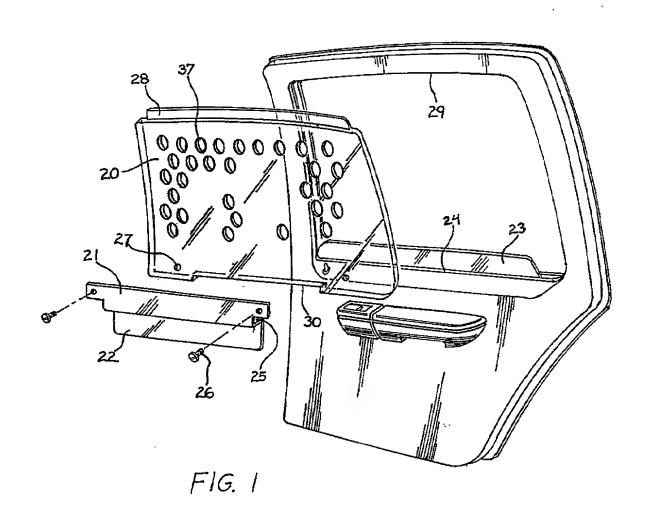

A window insert formed from a sheet of optically transmissive material, said window insert having an upper edge defined to be inserted, along with the retractable glass panel window, into the upper receiving channel of the window frame, said window insert having a solid surface, said window insert having one or more fastening receivers; and

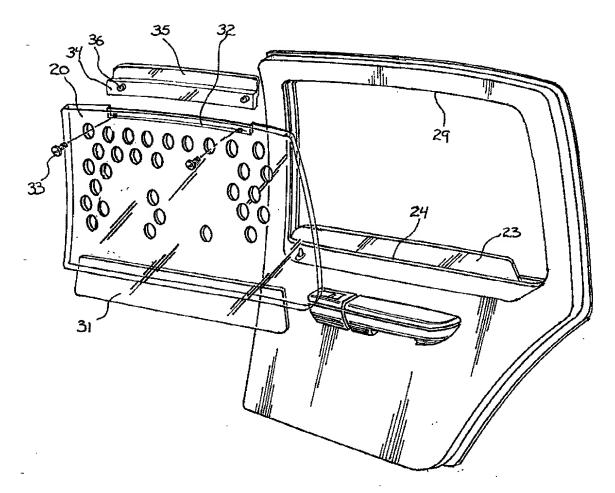

a mounting bracket with the lower edge defined to be inserted between the retractable glass panel window and the lower inside weather stripping of the retractable glass panel window, said mounting bracket having a flat surface to receive the window insert, and said mounting bracket having one or more fasteners to retain the window insert.

- 12. A safety device of claim 11 wherein said window insert is formed from a material selected from the group consisting of optically transmissive polycarbonates, acrylics, and plastics.
- 13. A safety device of claim 11 wherein said window insert is formed from a bullet proof material.
- 14. A safety device of claim 13 wherein said bullet proof material is selected from the group consisting of glass composite and glass/plastic composite.
- 15. A safety device of claim 11 wherein said window insert has the bottom edge notched to assist during installation and accepts the mounting bracket.

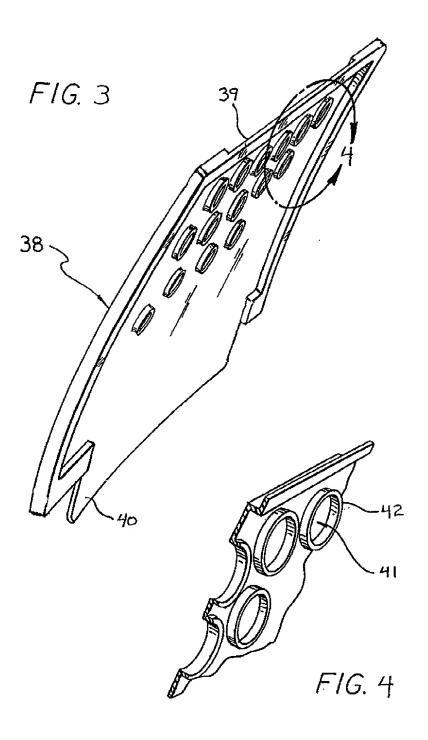

#### **ABSTRACT**

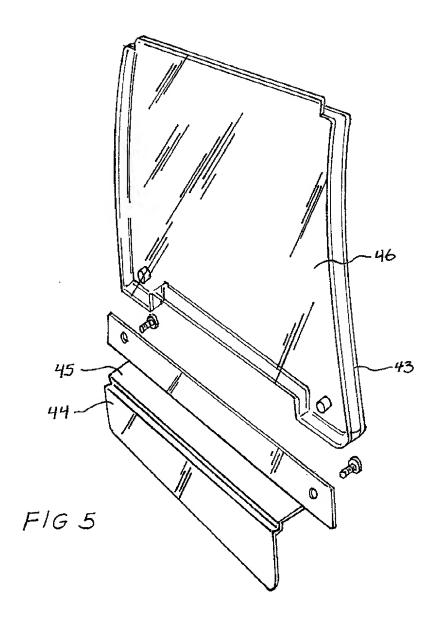

A safety device for an automobile. The safety device being a window insert designed to fit within the standard frame of a window and be retrained within the frame by the upper edge of the window insert, along with the window, fitting into the upper channel of the window frame and the bottom of the window insert fitting into and being retained by a bracket with the lower edge fitting between the window and the lower inside weather stripping of the window. The window insert can be installed in thirty seconds, requires no modification to the window, window frame, or door, and when in place the window may be raised or lowered at any time. The window insert may include orifices to allow air inflow and/or outflow so as to provide a continuous flow of fresh air into the vehicle. The safety device may be used to retain a child or a pet, and can be formed from a plastic, plexiglass, or polycarbonate material. Alternatively, the window insert may be formed from a high impact or bullet proof material.
